WPI; 2001-318749/34.

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

Claim 1; SEQ ID NO 4238; 2537pp + Sequence Listing; English

CC length cDNAs defined in the specification. Where a primer set complementary to the CC complementary strand of a polynucleotide comprises one of the 5602 cc nucleotide sequences defined in the specification, where the CC onligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end' cc sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC specification. The primer sets can be used in antisense therapy and in the specification. The primers are useful for synthesising polynucleotides, cgene therapy. The primers are useful for synthesising polynucleotides, comparticularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and compared the proteins encoded by compassing the primers allow obtaining of the full-length cDNAs and proteins encoded by compassing the proteins are also useful for the compassing compassing the proteins and compassing of the full-length cDNAs and proteins encoded by compassing the proteins are also useful for the compassing compassing compassing the proteins encoded by compassing co invention describes primer sets for synthesising 5602 full-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                           gene expression (comprising a plurality of single exon nuclear and probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of measuring human gene expression, a vector comprising the single exon probe cited above, an ORP-encoded peptide comprising at least 8 contiguous amino acids of any of the above-mentioned amino acid sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing human gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records cited above in the expression of a single exon probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe the hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human centered to the string of the string human centered to the stri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alternations or as tools for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expression analysis. The probes may be used as tools for surveying clissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030194704

                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptides, sequences hybridizing to these nucleotides, sequences encoding partial polypeptides and sequences having 70% or 90% identity the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a nucleotide sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 691
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           631
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           571
```

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30899) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; a method of detecting polynucleotides or polypeptides of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of poventing, treating or ameliorating a medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Percent Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                invention; methods for the identification of compounds that modulate the expression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention CC (ADC31861-ADC32627) and the polypeptides encoded by the contigs (ADC32628 ADC3394). The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the cidentification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on NNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's cidenater. The nucleic acids may also be used as hybridisease or concer. The nucleic acids may also be used as hybridiseation probes or concer. The nucleic acids may also be used as hybridisetion probes or crimers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, can as food supplements. The present sequence represents a specifically claimed human cDNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was for the print of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 969
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ftp.wipo.int/pub/published_pct_sequences.

ID ACH92
    The invention relates to a nucleic acid probe for measuring human gene compression, comprising any of the 27,400 fully defined nucleotide encoding at least 8 amino acids of any of the 6888 amino acid sequences (fully defined in the specification. The probe is a single exon probe that chybridises under high stringency conditions to a nucleic acid molecule cather shall be set of single exon nucleic acid probes for measuring human cells or tissues. Also included are a spatially-cather shall be expressed in human cells or tissues. Also included are a spatially-cather shall be expressed in plurality of single exon nucleic acid probes for measuring human gene expression, a method of gene expression (comprising a plurality of single exon nucleic acid caid cand addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of measuring human gene expression, a method of contiguous amino acids of any of the above- mentioned amino acid sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above, that binds specifically to a peptide cited above, an ORP-encoded peptide exon probes or microarrays to cather a string to measure gene expression, a method of providing thuman gene expression data by subscription, and a computer-readable cated above. The probe, methods and apparatus are useful in gene captesion analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, the probes are used in identifying and characterising calternative splicing events, in detecting and characterising gross calternative splicing events, in priming the synthesis of nucleic acids, or in expressing the ORP-encoded peptide. The present sequence is a human calcider this patent did not form part of the printed specification, but was obtained calternated and out the printed specification.
patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030194704
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; probe; ss; gene expression; single exon probe; microarray;

New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. diabetes, sclerosis, atherosclerosis, cancer, infections, osteoporosis or parkinson's disease. multiple

Claim 22; Page 139; 266pp; English

The present invention relates to a new polypeptide (NOVX). The NOVX CC polypeptide, nucleic acid and antibody are useful in the manufacture of a comedicament for treating a syndrome associated with a human disease, CC preferably a NOVX-associated disorder. The NOVX nucleic acids, polypeptides and antibodies are useful for treating, preventing or CC diagnosing diseases such as cancers, Hodgkin disease, Von Hippel-Lindau CC syndrome, Alzheimer's disease, stroke, tuberous sclerosis, erebral cpalsy, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, ataxia-cc telangiectasia, leukodystrophies, addiction, anxiety, depression, pain, obesity, Crohn's disease, osteoporosis, inflammatory bowel disease, inferrility, inflammatory bowel disease, atherosclerosis, hypertension, cc scleroderma, haemophilia, diabetes, pancreatities, autoimmune disease, asthma, arthritis, immunodeficiencies, HIV, viral, bacterial or parasitic infections, or graft-versus-host disease. The nucleic acids and cpolypeptides may also be used as targets for the identification of small cdifferentiation, cell proliferation, hematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind continuouspecifically to NOVX substances for use in therapeutic or cdiagnostic methods. The nucleic acids are further used as hybridisation content of the invention. The present nucleic acid sequence encodes a human NOVX protein of the invention.

cc syndrome, Alzheimer's disease, stroke, tuberous sclerosis, cerebral palsy, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, erebral cpalsy, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, ataxia-cc palsy, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, ataxia-cc infertility, inflammatory bowel disease, inflammatory bowel disease, inflammatory bowel disease, coresis, inflammatory bowel disease, atherosclerosis, hypertension, scleroderma, haemophilia, diabetes, pancreatitis, autoimmune disease, asthma, arthritis, immunodeficiencies, HIV, viral, bacterial or parasitic infections, or graft-versus-host disease. The nucleic acids and core polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell griderentiation, cell proliferation, haematopolesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or chiaminospecifically to NOVX substances for use in therapeutic, and probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present nucleic acid sequence encodes a human NOVX protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          08-MAR-2001

                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated human secreted protein (SECP)

CC polypeptide from 63 fully defined protein sequences given in the

CC specification. The polypeptide is useful for the diagnosing/treating of a

CC disease with decreased/overexpression of SECP. Examples of disorders

CC associated with abnormal expression of SECP include a cell proliferative

CC disorder e.g. arteriosclerosis, cancers; autoimmune/inflammatory

CC disorder, AIDS, allergies, anaemia, asthma; cardiovascular disease e.g.

CC congestive heart failure, ischaemic heart disease; developmental disorder e.g.

CC congestive heart failure, ischaemic heart disease; developmental disorder e.g.

CC renal tubular acidosis, hypothyroidism, neurological disorder e.g.

CC Alzheimer's disease, dementia, Parkinson's disease, epilepsy or stroke.

CC The SECP polymuclectide and polypeptide are further useful for analysing

CC the proteome of a tissue or a cell type. The polymuclectide is useful for

CC creating knockin humanised animals (plgs) or transgenic animals (mice or

CC rats) to model human disease, and for somatic or germline gene therapy,

CC and further for generating hybridisation probes useful in mapping the

CC raturally occurring genomic sequence. This polymuclectide sequence

CC represents the DNA of a human secreted protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ding to DAM,

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising; (a) any of 4622 nucleotide sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region c (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3 a process for producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by any of the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human tumour-associated antigenic target (TAT) cDNA sequence #2473.
                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid molecule and encoded polypeptide, i preventing or treating cell proliferative disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2004-534300/51.

cc length coding region of the above nucleotide sequences; or (c) a sequence (c) length coding region of the above nucleotide sequences; or (c) a sequence (c) at least 80% identical to (a) or (b); (5) a chimeric polypeptide (c) an isolated antibody that binds to the above polypeptide; (6) an isolated antibody that binds to the above polypeptide; (7) a process for producing the antibody; (8) an isolated oligopeptide that binds to the above polypeptide; (10) a cc composition of matter comprising the above (c) polypeptide; (10) a cc composition of matter comprising the above (c) polypeptide; (10) a cc composition of matter comprising the above (c) polypeptide; (10) a cc composition of matter contained within the container; (12) methods of the composition of matter contained within the container; (12) methods of cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of cell is at least in part dependent upon a growth of cell is at least in part dependent upon a growth of described above; (15) methods of distancer of containing the protein; (14) a method of determining the presence of a protein in a sample suspected of containing the protein described above; (15) methods of diagnosing the presence of a tumour in a contain, and (17) a method of binding an antibody, oligopeptide or companic molecule to a cell that expresses the protein described above. The TAT sequences have cytostatic activities, and can be used in gene therapy. The composition and methods are useful for diagnosing, gene therapy. The composition and methods are useful for diagnosing, cell proliferative disorder or cancer. The present sequence represents a human TAT cDNA sequence from the present invention.

               CC target (TMT) nucleic acid (comprising: (a) any of 4622 nucleotide
CC (a); (c) the complement of (a) or (b); (d) a sequence that has 80%
CC (a); (c) the complement of (a) or (b); (d) a sequence that has 80%
CC (a); (c) the complement of (a) or (b); (d) a sequence that has 80%
CC (c). Also described: (1) an expression vector comprising the above
CC (c). Also described: (1) an expression vector comprising the above
CC (c). Also described: (1) an expression vector comprising the above
CC (c). Also described: (1) an expression vector comprising the above
CC (c). Also described: (1) an expression vector comprising the above
CC (c). Also described: (1) an expression vector comprising the above
CC (c). Also described: (1) an expression vector comprising the above
CC (c). Also described: (1) an amino acid sequence encoded by the full-
CC (c). Also described: (b) an amino acid sequence encoded by the full-
CC (c). Also described: (b) an amino acid sequence encoded by the full-
CC (c). Also described: (b) an amino acid sequence encoded by the full-
CC (c). Also described: (b) an amino acid sequence encoded by the full-
CC (c). Also described: (b) an amino acid sequence encoded by the full-
CC (c). Also described: (b) an amino acid sequence encoded by the full-
CC (c). Also described: (b) an amino acid sequence encoded by the full-
CC (c). Also described: (c) an isolated of plypeptide; (d) a sequence
CC (c). Also described: (e) an anino acid sequence encoded by the full-
CC (c). Also described: (e) an anino acid sequence encoded by the full-
CC (c). Also described: (e) an anino acid sequence encoded by any of the above
CC (c). Also described: (e) an anino acid sequence encoded by any of the above
CC (c). Also described: (e) an anino acid sequence encoded by the full-
CC (c). Also described: (e) an anino acid sequence encoded by the full-
CC (c). Also described: (e) an anino acid sequence encoded by the full-
CC (c). Also described: (e) an anino acid sequence encoded by the full-
CC (c). Also described: (e) an anino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S

The TAT sequences have cytostatic activities, and can be used in gene therapy. The composition and methods are useful for diagnosing, preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a human TAT CDNA sequence from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence)3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03165 to AAH13628 and AAH13632 to AAH3742 represent human cDNA sequences; ABB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent controlleds, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1;

                                                                                                             and conditions (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and tumours. They are also useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating haematopoiesis and for treating myeloid or lymphoid cell deficiencies.
                                                                                                                                                                                                                                                                                                                                                                                    proteins. The polynucleotides can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The polynucleotides and proteins can also be used as nutritional supplements. The proteins are useful in the treatment of various immune deficiencies and disorders such as viral infections, bacterial infections, fungal infections, autoimmune disorders (e.g. rheumatoid arthritis, multiple sclerosis, autoimmune thyroiditis and diabetes) and allergic reactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Five hundred and ninety two polynucleotides derived from a variety of human tissue sources which encode secreted proteins, useful for treat immune deficiencies and disorders such as autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   coagulation disorder; inflammatory disorder; Crohn's disease; incision, tissue regeneration; wound healing; burn; haematopoiesis; myeloid cell deficiency; lymphoid cell deficiency.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; secreted protein; gene; ss; nutritional supplement; haemophilia viral infection; bacterial infection; fungal infection; diabetes; asth autoimmune disorder; rheumatoid arthritis; multiple sclerosis; tumour;

The invention relates to human secreted polypeptides designated LP095, LP219, LP220, LP221, LP222, LP237 or LP238 and nucleic ac molecules encoding such polypeptides. Novel secreted proteins of the invention are used for treating diseases such as atherosclerosis, Alzheimer's disease, diabetic retinopathy, psoriasis, pancreatitis, arteriosclerosis, rheumatoid arthritis, colorectal adenomas, severe combined immunodeficiency, ischaemia, carcinomas, haemolytic anaemia, reperfusion injury, neoplasms and cancer especially liver cancer. They are also used for wound healing. Polynucleotides of the invention can it used to generate transgenic animals or knock out animals, which in turn are useful in the development and screening of therapeutically useful reagents for use in the treatment of diseases associated with LP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page 140-141; 145pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel proteins and polynucleotides of secreted proteins useful for treating various diseases e.g. rheumatoid arthritis, cancer, psoriasis, diabetic retinopathy, arteriosclerosis, ischemia or reperfusion injury.
                                                                                        polypeptide associated activity. They are also used in gene present sequence is human LP237 secreted protein encoding c

                                                                                                                                                                                                                                                      conclositide sequence selected from any of 948 sequences (ABZI1169)

CARZI2066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP68949) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Parkinson's proliferative disorders (cancer), neurodegenerative diseases (Parkinson's Alzheimer's disease), autoimmune diseases (multiple sclerosis, cliabetes, lupus) genetic disorders, myeloid or lymphoid disorders, liver platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format and directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Parkinson's disease; Alzheimer's disease; autoimmune disease; multiple sclerosis; diabetes; genetic disorder; wound; burn; infection, arthritis; cytostatic; immunomodulator; nootropic; neuroprotective; antiparkinsonian; antidiabetic; immunosuppressive; dermatological; haemostatic; vulnerary; fungicide; antibacterial; virucide; protozoacide;

The methods and compositions of the present invention are useful for the diagnosis and/or treatment of diseases or conditions associated with aberrant expression or activity of the arginine-rich protein-like polypeptides, such as cancer and inflammation. They can also be used in forensics, gene mapping, identification of mutations responsible for genetic disorders, and in assessing biodiversity. The present sequence represents a novel human arginine-rich protein cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated arginine-rich protein-like polynucleotides and polypeptides, useful for diagnosing and/or treating conditions associated with aberrant activity of the arginine-rich polypeptides, such as cancer and

decreased expression of functional CCYPR, while CCYPR are used to treat diseases or conditions associated with overexpression of functional CCYPR, while CCYPR antagonists are used to treat diseases or conditions associated with overexpression of functional CCYPR. Monoclonal or polyclonal antibodies to CCYPR may be used in enzyme-linked immunosorbent assays (ELISA) or radioimmunosasys to detect CCYPR. CCYPR itself may be used to detect compounds e.g., antibodies, oligonucleotides and proteins (receptors) that specifically bind to CCYPR, and in drug screening methods to identify compounds that modulate the activity of CCYPR. CCYPR mucleotides can be used to generate transgenic animal models of human disease, and can be used in gene therapy in target cells with genetic abnormalities with respect to the expression of CCYPR. Diseases which can be diagnosed, treated and creased using CCYPR. Diseases which can be diagnosed, treated and compounded immune, developmental and cell signalling disorders, and cell proliferative disorders including cancer. Specific examples of these disorders include anaemia, epilepsy, arteriosclerosis, asthma, cancer, and cell anaemia, disorders of the menstrual cycle and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from brosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of
                                                                                                                                                                                                          New isolated nucleic acid
genes from Drosophila and

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL10176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                       for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                           are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing blodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR,
                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated polynucleotide comprising any one 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding a reading frame of the novel polynucleotide. The nucleic acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polynucleotide sequences obtained from various cDNA libraries, as hybridization probes, as oligomers for PCR, for chromosome and gomapping, in the recombinant production of protein, or in generating

Claim 15; SEQ ID NO 9211; 80pp; English
```

CC measuring human gene expression, a vector comprising the single exon CC probe cited above, an ORF-encoded peptide comprising the single exon CC contiguous amino acids of any of the above- mentioned amino acid CC sequences (optionally with conservative amino acid substitutions), an CC methods of selling and/or licensing single exon probes or microarrays to centhods of selling and/or licensing single exon probes or microarrays to CC a customer desiring to measure gene expression, a method of providing human gene expression data by subscription, and a computer-readable contrage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe cited above. The probe, methods and apparatus are useful in gene cappression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. CC In addition, the probes are used in identifying and characterising craliferations, in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, cor in expressing the ORF-encoded peptide. The present sequence is a human construction of the printed specification, but was obtained contained and the contained across the contained across of the printed specification, but was obtained contained across the contai gene expression (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid. sequences fully defined in the specification. The probe is a single exon probe that seqdata.uspto.gov/sequence.html?DocID=20030194704

                                                                                                                                                                                                                                                                                                                                                                                                       sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at 1-s nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5600 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

밁
        CC length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide which complementary to the

CC complementary strand of a polynucleotide which comprises one of the 5602

CC oligonucleotide sequences defined in the specification, where the

CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination

CC oligonucleotide comprising a sequence complementary to the

CC onplementary strand of a polynucleotide which comprises a 5'-end

CC sequence and an oligonucleotide comprising a sequence complementary to a

CC polynucleotide which comprises a 3'-end sequence, where the

CC oligonucleotide comprises a 1'-end sequence, where the

CC oligonucleotide which comprises a selected from those defined in the

CC offication. The primer sets can be used in antisense therapy and in

CC gene therapy. The primers are useful for synthesising polynucleotides,

CC oparticularly full-length cDNAs. The primers are also useful for the

CC detection and/or diagnosis of the abnormality of the proteins encoded by

CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and

CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893

CC present human amino acid sequences, and AAH13629 to AAH3632 represent

amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, cancers and cancer metastases of haematopoietic derived cells. AAK64703 to AAK67694 represent human immune/haematopoietic antigen genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                           05-DEC-2000;
